環形鼓風機 Ring Blowers (Side Channel Blowers)

特點：

小型 ● 重量輕 ● 高風壓

前頃式葉片設計，體積小、質量輕且較有高壓力之產生。

低噪音

新設計，能消除切風時產生之高頻及特殊之消音材質，大幅降低噪音比。

低震動

葉片均經過電腦平衡校正與高精密的機械加工，使震動降到最低。

Features:

Low noise and vibration

Dynamic balancing minimizes vibration.

Dust-proofed shaft seal

Protects bearings from contaminated air stream and possible foreign particle damage.

High reliability

Directly connected motor shaft-impeller provides reliable, long term performance. No gears, belts, motor brushes or sliding blades to require periodic maintenance.

Space-efficient design

Unique design results in substantial airflows at moderate pressures in minimum space and weight.

Versatility

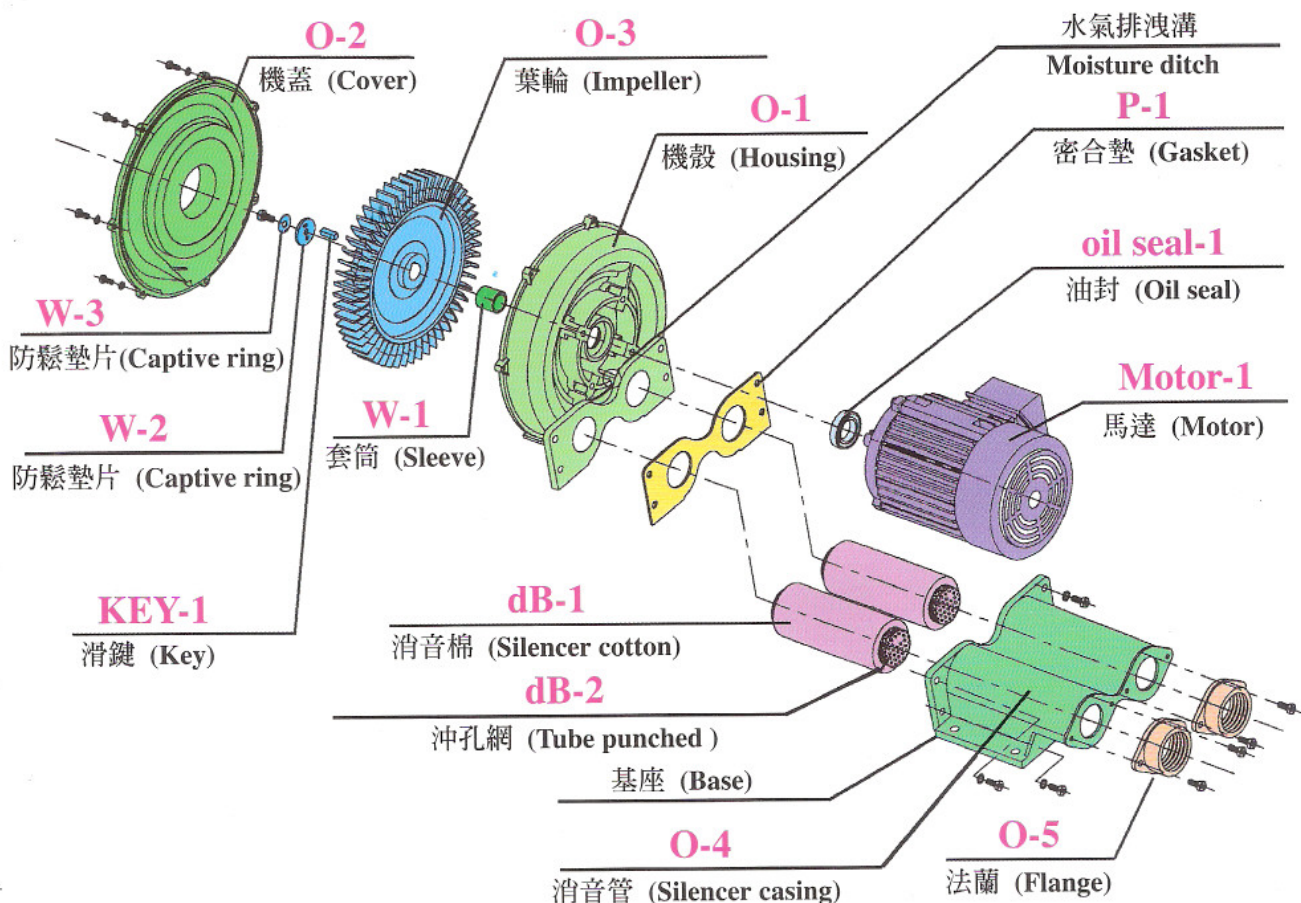

Easily throttled and changed from pressure to suction operation. May be mounted in a variety of fashion.

Stable airflow

Centrifugal compressor design delivers smooth, stable airflow with no pulsations.

High-pressure airflow

Produces continuous high-pressure airflow. The Ring Blower is ideally suited to many industrial applications.

環形鼓風機 Ring Blowers (Side Channel Blowers)

用途：

- 粉粒體輸送
- 紡織纖維集塵
- 裁紙（布）機氣墊
- 污水處理瀑氣
- 窯業礦業空氣
- 重油噴燃
- 造紙紙漿脫水
- 無梭織布機專用
- 玻璃工業及冰廠空氣泵
- 遂道工程壓送空氣
- 水產養殖氧氣供給

Applications:

- Grain elevators
- Textile fiber collections
- Paper industry
- Sewage treatments
- Cement manufacturing
- Diesel burning
- Pulp industry
- Glass manufacturing
- Ice manufacturing
- Tunnel ventilation
- Fishery industry
